WESTIN Appl. No. 10/581,607 November 3, 2008

## RECEIVED CENTRAL PAX GENTER

NOV u 3 2008

## AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1 (currently amended). A steel <u>corrosion resistant</u> material having a good resistance to corrosion, characterised in that it <u>which</u> consists of an alloy containing in % by weight:

max 0.12 C

0.5-1.5 N

12-18 Cr

max 0.5 Mn

max 0.5 Ni

1-5 (Mo + W/2)

min 0.3 Nb

 $\max 1.5 (V + Nb/2 + Ti)$ 

0.1-0.5 Si

from traces and up to max 2.0 Co

from traces and up to max 0.1 S

balance iron and essentially only incidental impurities at normal contents.

2 (currently amended). A steel material according to claim 1, <del>characterised in that wherein after hardening and tempering, it has a hardness of 58-65 HRC and a microstructure containing 3-6 % by volume of the two hard phases M(N,C) and Cr<sub>2</sub>N in</del>

a matrix that essentially is constituted by tempered nitrogen martensite, which nitrogen martensite comprises 5-20 % residual austenite.

- 3 (currently amended). A steel material according to claim 1, characterised in that wherein it contains max 0.11 C, preferably 0.02-0.10 C.
- 4 (currently amended). A steel material according to claim 1, <del>characterised in</del> that wherein it contains 0.7-1.2, preferably 0.8-1.0 N.
- 5 (currently amended). A steel material according to claim 1, characterised in that wherein it contains 12.5-17, preferably 13-16-Cr.
- 6 (currently amended). A steel material according to claim 1, characterised in that wherein it contains max 0.4, preferably max 0.3 Mn.
- 7 (currently amended). A steel material according to any one of claims 1-6. characterised in that claim 1, wherein it contains max 0.4, preferably max 0.3 Ni.
- 8 (currently amended). A steel material according to claim 1, characterised in that wherein it contains 2-4, preferably-2.5-3.5 (Mo + W/2).
- 9 (currently amended). A steel material according to any one of claims 1-8, characterised in that claim 1, wherein it contains 0.05-0.3, preferably 0.1 V.

November 3, 2008

10 (currently amended). A steel material according to claim 1, characterised in that wherein it contains 0.3-0.7, preferably 0.5 1.0 Nb.

11 (currently amended). A steel material according to claim 2, characterised in that wherein it has been hardened by austenitizing at 1000-1200 °C, preferably at 1050-4150 °C-and most preferred at 1100-1150 °C, deep cooled at -80 - -200 -80 to -200 °C, and thereafter tempered at a temperature of 400-560 °C<del>, preferably at 430-500°C and</del> most preferred at 460-500 °C.

12 (currently amended). A steel material according to claim 11, characterised in that wherein it has a hardness of 60-64 HRC and most preferred about 62-63 HRC.

13-14 (canceled).

15 (currently amended). A steel material according to claim 1, characterised in that wherein it is soft annealed and that in the soft annealed condition it has a hardness of 220-250 HB (Brinell hardness), preferably 230-240 HB.

16 (currently amended). A steel material according to claim 1, characrterised in that wherein it is a powder metallurgically manufactured material.

17-21 (canceled).

Appl. No. 10/581,607 November 3, 2008

- A steel material according to claim 1, wherein it contains 0.02-0.10 22. (new) C.
  - A steel material according to claim 1, wherein it contains 0.8-1.0 N. 23. (new)
  - A steel material according to claim 1, wherein it contains 13-16 Cr. 24. (new)
- A steel material according to claim 1, wherein it contains max 0.3 25. (new) Mn.
- A steel material according to claim 1, wherein it contains max 0.3 26. (new) Ni.
- A steel material according to claim 1, wherein it contains 2.5-3.5 27. (new) (Mo+W/2).
  - A steel material according to claim 1, wherein it contains 0.1 V. 28. (new)
- A steel material according to claim 1, wherein it contains max 0.7 29. (new) Nb.

- Appl. No. 10/581,607
- A steel material according to claim 11, wherein it has been 30. (new) hardened by austenitizing at 1100-1150 °C, deep cooled at -80 - -200 °C, and thereafter tempered at a temperature of 460–500 °C.
- A steel material according to claim 12, wherein it has a hardness of 31. (new) 60-64 HRC.
- A steel material according to claim 15, wherein it has a hardness of 32. (new) 230-240 HB.
- A knife or tool of steel material, wherein the steel material is the 33. (new) one defined in claim 16.
- A machine knife or manual knife of steel material, wherein the steel 34. (new) material is the one defined in claim 16.
- A steel material plastic moulding tool or injection screw for plastics, 35. (new) wherein the steel material is the one defined in claim 16.
- A steel material tool for cutting paper based laminated products for 36. (new) food and beverages, wherein the steel material is the one defined in claim 16.

**WESTIN** Appl. No. 10/581,607 November 3, 2008

A ball bearing of steel material, wherein the steel material is the 37. (new) one defined in claim 16.
